

## Student Instructions for Putting the Ecocolumn Together

1. Remove the bottle cap from the base of the terrarium. Leave it off for the rest of the unit.

2. Pick up four strips of tape.

3. Stack your bottles as pictured.

4. Use two pieces of tape to attach part A (the aquarium) to part C (the connector). Use two pieces of tape to hold part T (the terrarium) to part C.

**Helpful hint:** Turn under one corner of each piece of tape to make it easier to get the tape off later.

## Terrestrial Food Chain Wheel

**Directions:** Cut out the circular food chain wheel and the sliding guide. Make certain you cut out the center of the model. Fold the flaps of the guide around the model. Tape the two flaps together so that the guide slides easily.
